

Survey & installation

The Trellicor Security Group or one of its trusted distributors will send a qualified and trained surveyor to measure the aperture for securing and make sure that all relevant details are taken into account. This is a vital service as our grilles are all bespoke.

Our installation teams undergo rigorous training to ensure that our products are fitted in accordance with the requirements of LPS 1175 where appropriate, and in all cases, in the most effective manner possible.

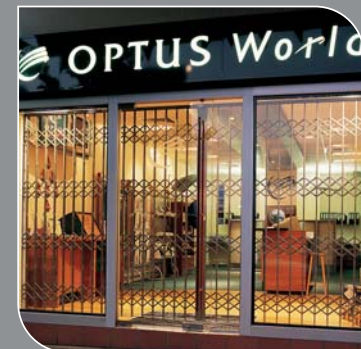

A security product is only as secure as its installation and, for this reason, we specify our own tamper-proof fixings for different substrates.

Our installation teams have installed security grilles for most BP forecourt shops as well as a large number of Sainsbury's stores and petrol stations. In some cases installations have taken place after store hours in the small hours of the morning – whatever it takes to get the job done properly!

All Trellicor fitters in the UK are UKPIA Safety Passport Holders in line with the requirements of the UK Petroleum Industry Association.

Retractable Security Grilles

The final **barrier** between a burglar and your **property**

Only strong, physical barrier security can prevent a burglary attack from being successful. The products of the Trellicor Security Group have been tested and certified to provide a measurable level of security for your peace of mind.

The Crime Barriers

Trellidor retractable grilles have been protecting people and their property since 1976 and are sold in forty countries around the world.

They are the final barrier between a burglar and your property and the last thing preventing crime after the alarms have sounded and the CCTV cameras have recorded their images. That's why we make them STRONG.

The STRONGEST grille on the market is the Trellicor Trojan—the only grille that

has been tested by the LPCB against Loss Prevention Standard 1175 and achieved Security Rating level 2. The testing on the Trellicor Trojan (SR2) and Trellicor Plus (SR1) means that we can offer you a measurable level of security and a 'Police Preferred Specification'.

Police Preferred Specification

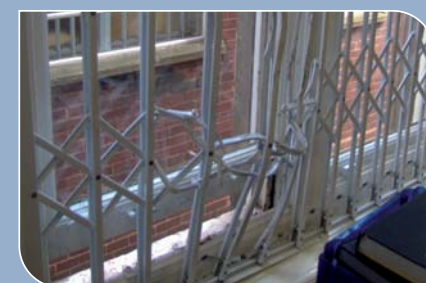

In fact, we are so confident about the strength of our grilles that we tested them in our South African factory using our Marketing Director as a guinea pig.

A 100 kilogram wrecking ball was swung at the Trellicor while the Marketing Director stood behind it. If you would like to see this footage for yourself it is available from our website www.trellicor.co.uk

2

Here in the UK our grilles have been tested by many unwitting burglars and our customers are delighted with the results. The Profit Protection Manager of one of the largest supermarket groups said, 'We had Trellicor Plus installed at one of our Petrol Station forecourts following a series of actual and attempted break-ins that were costing us about £6k each time. Since the installation we have had two unsuccessful attempts both of which

were prevented by Trellicor Plus.

Other high-risk sites with a history of break-ins have not had a single incident since installation and we believe it is a valuable deterrent in Redditch where we had a series of three break-ins last year. Heyford Hill had two break-ins with high stock losses each time but again—we have had no successful break-ins since the Trellicor Plus was installed.'

Make it **secure**
Make it **strong**

The final barrier

Trellidor Retractable Grilles:

- provide strong, steel physical security which deters and prevents criminals from gaining entry.
 - are tailor-made to suit any door, window or passage opening. Even difficult-to-secure openings can be accommodated by our design and development team.
 - retract easily as their weight is carried on the top track.
 - stack neatly to either one side or on both sides of the opening to suit individual building configurations.
 - allow the free flow of air and light whilst maintaining high levels of security.
 - are custom-made and installed by qualified fitters.
- The entire range of grilles can be supplied in a retractable or fixed format. Many buildings have apertures that do not need access but still require security. By supplying a fixed grille that matches the retractable grilles for these apertures, it is possible to reduce costs and maintain the style of the building.

Make it secure

Trellidor Plus is a tested and certified security grille featuring an enhanced specification, including top track cover plate, and unique steel bottom lattice, which provides your property with effective, yet aesthetically pleasing, security.

Trellidor Trojan is the strongest retractable security grille available. It is for use where security risks are high and has been designed to resist entry from a determined attacker using more sophisticated tools, over a longer period of time.

Common applications include:

- Airports
- Shopping centres
- Corporate offices
- Industrial buildings
- Banks
- Police stations
- Jewellery stores
- Chemists
- Military installations
- Museums
- Petrol forecourts
- Public sector buildings
- Goods access
- Car park entrances
- Shop fronts
- Drugs storage

JAEGER

A wide range of configurations of the Trellidor have been individually developed to meet specific market requirements. For example:

Options:

- Hinge-away unit
- Angle units
- Hinge-up bottom track
- Covered track
- Cut-in tracks
- Side-by-side
- Removable track
- Electric access control

Curved Trellidor

Sunken bottom track

Lift up bottom track

Make it secure

Trellidor A200 is a vastly enhanced version of the original Trellidor which has been protecting people and their property since 1976. It has been tested by time in some of the toughest security environments in the world, including South Africa and Israel. It has been attack tested and is SAIA* approved with an A grade rating.

*South African Insurance Industry Approval
